Hey-Hey!!!,I have used ASC and GE with good results. If I found these others at similar pricing, I am sure I would have tried them. The data sheet I looked at shows a max of 70 uF in 370 vac. The 100's are a nice option IMO.When I tried two slightly differnent caps, of GE and ASC make i the output couping position, I heard subtle differences, probably as much from the size difference as from the maker. Who knows? it was a while ago, and the system has improved in general, so things would almost certainly be different now.I am NOT going to say, 'don't use _____' unless I have a damn good (that is to say well documented and well researched)reason to do so. regards,Douglas!
