Hey-Hey!!!,I don't remember if Damir's proposed layout for the plate loads/CCS design has the MOSFET's set at right angles, but I suggest that you do it that way. It might also be best to put them at opposite corners of the board too. they seem to be able to interfere with each other (at least the littler TO-92 can be put close enough to get in each other's way I think).regards,Douglas
