Yes, I agree - "modern" sources like CD or DVD are often "hot" and A~16 can be too much... However, I'm sure that those good people here will definitely come to hate you after this...:-) The only chance you can redeem yourself is to make Hg-rectifier (866?) PS (say of "Guinevere" PT-2x400V), we need exactly $B+=304V$, haha (9V drop through OPT with $R_w=150\ \Omega$, $U_{ak}=250V$, $U_{gk}=45V$). Current draw - 60mA for the output tube, 8-15 mA for the driver....
