The 2 yellow are for the rectifier heater. for now don't hook the CT(Y/W) to anything. for a normal full wave rectifier you do not need to connect the heater. Let me know what rectifier you are using as well as to what pin to take power from. I am working day and night at the mines. I am sure Douglas will answer if I can't get back to you...JohnPS. I did get the CCS wired up will try to post a pic when I can
