If we go 300B PP, will the Ginevere Tx be big enough? I'm sitting on 3 of these Tx's and would like to use them for the amp. I like the idea of 1624 - clear glass and anode caps. This has some serious sex appeal going for it. Before I start puncturing a hole in a perfectly good top plate, what will dual 12B4s bring to the dance?.....Colin
