As a professional service Engineer, I well know how difficult it can be to track down the source of a problem. It can be a real bitch to find something you can hang your hat on. You have to trust your instincts. So far you have found two separate indications of a bad vol pot. In my mind, it's out of there. Maybe it's just a bad solder joint but for five bucks, it's not worth it. While your at it replace the grid resistors. you'll feel better...John
