Hi Colin,I think these are just the ticket.They are 800VCT @200ma, 5VCT @2A, 5VCT @3A, 6.3VCT @6A There will be no problem at 210ma if you don't fully load all of the other secondarys.They were for the DRD but I have decided to go with a transformer that will support a 45 or 2A3 as well as 300B...More on this in a little bit Let me know and I will send them out...John
