Forgot, apart from 760Vct/0,3A, PT has two 5V/1,5A windings (300B filaments), one 6,3Vct/2A (driver heaters), two 5Vct/3A windings (for rectifiers) and I get one 14V/1A winding I didn`t ask for, that`s the problem now:-).Stereo SE 300B amp, now I have all the parts and probably I`ll start building it...just to solve new PS "problem", then breadbording and actual completing on/in 2HE rack case (pretty small)...
