I'll send the schematic to Wayne once I have mine up and running. Figure a week or so more. I need to figure out a few more mechanicals and then fire her up. DC filaments is LCRC. B+ is LC. The buffer is a cascode 5687/MOSFET hybrid. So, one audio valve, one rectifier valve(a Red Bank Bendix Hy-G-300 with a 40 second warm up time).Who knows, it could be a flop...OTOH....:-) cheers,Douglas
