"...I am exploring the effect of mu g1-g2..."Now, that`s interesting! Keep us posted about your findings.BTW - can you explain your reasons for using pentodes diff. driver in "classic" PP 2A3 output configuration? I mean, most folks would triode-connected those pentodes, no Ug2/Ig2 supply, and, say - D3a in triode: μ~80, rp~2k.
