Here's mine: 1" Vane Throat Plate Body Mortise/ either one is fine but I like the joint integrity of the mortise and I don't see why it would be a lot more money so why not? I would like to use one of my Altec drivers so I would assume that means rectangle to circle? If not then either one will do. Hardwood; I guess plywood is out of the question then? Baltic Birch? Looks good so far. Thanks for doing this survey Garman.
