OK, I drew a nice schematic in CircuitMaker, which saves to a '.ckt ' file, what ever that is.
I tried to open it with all of my limited library of imaging software. No dice. So I cut and pasted it
into a Word doc and from my end it looks fine. Now how do I move it to the forum? I tried to paste
it in but it didn't take. Wayne I could e-mail you the word doc , but it is probably time to learn
to do this…John
