Subject: Re: Routing Out The Front Baffles Posted by FredT on Wed, 25 Oct 2006 19:25:52 GMT View Forum Message <> Reply to Message

For what it's worth, I use a Jasper circle jig on my router to do the cutouts. I make them either 1/2" or 3/8" (depending on the driver) smaller than the oveall diameter of the flange, then I use a rabbet bit to make the recesses. If anybody decides they're going to build enough speakers to justify buying a router, be sure to get a plunge router - this type is needed to use the circle jig. You don't need an expensive one. Mine is a \$99 Ryobi. Jasper Circle Jig
