I'll make a schematic for you tonight. Just one clarification though: The measured results are for a speaker with 1st order on both the tweeter and the woofer array. The tweeter has a 10uF cap followed by a 16 ohm shunt resistor across the tweeter. The woofer array has just a series 1.2mH inductor. I'll send a drawing of the crossover you've described too, but measurements of that configuration weren't as good as the pure first-order crossover.
