Mint amp built from kit. Kit contained pcb then I sourced all the parts. This amp features the following:Hand matched Vishay/Dale resistorsCRD Biased for Class A50k volume potentiometermini toggle switch for power3.5 mm (1/8" mini-style) stereo source and headphone jacks1 x 9 volt battery Orange LED power lightAD 8620 op-ampPanasonic 470uF/16V power caps1.0 uF 100V input capsStock gain set at 10.88$75 + shipping (from ontario)amp is just broken in maybe (15 hours). I have moved on to a headsave amp and a porta corda amp. You can't beat the novelty of the Altoid tin amp though - a conversation piece for sure. I found it a great match for Senn hd600,hd650 and Akg501.
