Would a single, bass driver only, Pi folded horn go lower than my Klipschorns? That is, using 2226's or 2241's? I am looking for as low as I can go, anywhere in the 20-29hz range is acceptable. My K's start rolling off at 50 and are dead quiet at 35. I want a lower response, but all the acoustic suspension sub's I've heard...well, they suck. All of the boominess and none of the bang.
