Hi Wayne -- I have been playing with Pialign and looking at speaker drivers available. I am partial to both the JBL 2226 and 2241 as far as price and various comments on this forum concerning linearity and distortion. Do you have any designs completed for 4 pi 15" professional stage monitors with two JBL 2226 drivers per cabinet? I would be using one JBL 2426 1" compression driver per cabinet. I have some cabinet solutions from Pialign for the bass cabinet above, but I would like to go to the master first (brown-nosing furiously, now :) Thanks! John
