I am about to start building my Pi7 horns, recently received the plans recently from Wayne. I have a pair of Peavey 22XT compression drivers. I have not seen any discussion about Peavey 22XT in the forum and I am not sure if this driver would make a suitable as high frequency unit for the Pi7. The specifications are as follows: Throat parameter: 1" Nonimal impedenance: 8 ohms Sensitivity : 111dB SPL 1w/1m on a CH-2 horn Frequency range: 500-20,000 Hz Frequency range: +/- 2dB 500-3,200 Hz, -3dB@8,000 Hz 6dB roll off from 8,000-20,000 Hz Diaphragm: titanium Power capacity : 40 watts I would appreciate any comments regarding its suitability and possible compensation network. Regards
