I am very close to building the Pro series 4 Pis using all JBL components but I still have a few unanswered questions about them.1. What is their max and min impedence?2. What are they crossed at (I am hoping that they are somewhat high because I don't want to be blowing the $300 JBL tweeters)3. How well do they image, how easy are they to place in a room?4. They are only 26" high, do they need speaker stands?5. What is their power handing?6. Does anyone have some better pics of the speakers, I am having a hard time understanding how the boxes are to look based on the drawings?
