The 944 woofer is through prototype and into production. I abandoned using composite material and went back to good-old wood. The shape doesn't really lend itself to using wood, but wood is so much easier to work with. I have one in my car and I built one for Tom. I've sold 4 so far. I'm not really advertising them heavily cause they take so long to build, about 8 hrs. Sorry to hear the car isn't running. I'm sure Tom can take care of it. Stop by sometime and I'll play the woofer in the car for you.Take care,Scott
