Hi Wayne,I have a question about your BR box dimensions. The internalbox dimension seems to be important because they could affectthe sound by a parasite resonance.From bibliography -the most common approach is use sqrt(5) "golden" ratios: 1/1.618 : 1 : 1.618 . Another approach is to use - I think- 1^(x/3) ratios (where x=1,2, 4,5, 7,8,...) to add only "agreeable harmonic" resonance.Will another ratios will work fine too ?Thanks in advance,O'Tor
