Hi Wayne!! I've tried your new compensation network in my 4Pi Pro. This made them sound even better (more "balanced"?). BUT, I would like to have more bass. I've tried to place the speakers in the corners. This gave me more bass, but I lost some of the other qualities I like. My room is too small for a 2242 sub, so I've thought of 3 possible solutions: 1. Build a 5 cu.ft box for my 2226.2. Build 2 subs of ~2 cu.ft with drivers like the Peerless XLS3. Build a single sub of ~5-6 cu.ft with a 15" driver (haven't figured out which one yet) Which solution do you think would be the best?
