Greetings and well met everyone. This my first time visiting this board. I usually read the Turntable forum and was directed to check out the PI Speaker website. My set up is LP12, Basic Plus arm, Grado reference cart. Music Fidelity XLS phono pre going to build Bottlehead Foreplay preamp and Paramour 3.5 watt tube amp. Currently using 89db Mirage 490i tower speakers. If I am to build my own speakers it's a toss up between Straight 8, Wilmslow Audio kits or Hammer Dynamics or Pi. Could I get some input of likes and dislikes..pros and cons...cost vs performance of these various kits?)Much appreciated for any input..thanks all
