Room size is 12' wide and 18' deep and deeper is the front door entry hall 6x8'. In the middle of my 12' wide wall is my 36" Sony Vega on TV stand. Have 5 shelf homemade stereo pine rack against wall next to TV. So there is only 1' wall left between the rack and side wall. Basically, I have my two Mirage towers 1' forward on both sides of the TV so they are 4' from back wall and 3' from side walls.-----

[--sony 36"---] [-rack-]

[] [Spker] [Spker]Im curious about the actual speaker cones. Ive read about Lowther and Hammer Dynamics interesting cone in the S-12. What makes the cones in the Pi's so good?
