hi till, great review! the pi's are simply amazing speakers. i have a friend who considers himself a true audiophile. he has spent in excess of 50k on his system, yet you can never listen to it as it is always torn apart waiting for the latest upgrade. he just bought the latest blue heron's (10k) and i listened, okay sound but not great, the pi's are simply better. i think the hybrid plasma tweeter closed him. he's scared to come over and listen to my pi's, maybe because he's spent more on speaker wire than i've spent on my whole system. and wayne, thanks for your no nonsense approach to audio, you've separated the snake from the oil and made listening to music fun again!!cheers,george
