Ok,I've just escaped the Bottlehead ward, complete with foreplay and plan to build paramours. I've stumbled into this forum with the following:small room (10x11x10), whopping 3.5 watts of power, wide range of musical taste (uhm, eclectic?), bass isn't the be all end all of music. I guess I'm needing minimum 96db sensitivity, but would feel better around 100db.Suggestions? one pi? two pi? Thanks in Advance,Marty
