what gives? just received my jbl 4655's from the tent sale. the worst sounding speaker ever. these must be the speakers which gave horns a bad name. all midrange, no bass, nasal and piercing. how does a company which produces some of the worlds best components deliver a finished product like this? the speakers each use one 2032h 15" woofer and one 2416h-1 compression driver in a 2373 horn. cabinets are 25.5"x19"x12.75".cheers,george
