Thanks for the "heads up." I've noticed for the last two days, I get about 20 E-Mails a day that appear to be addressed from someone in my "Address Book," but there is no message body - only an attachment. That's a tell-tale symptom of a virus, so I never open them. I haven't paid close attention to these E-Mail's because they are immediately disposed but it may be that they have an "underscore" like you've described. By the way, what's the "Mad board?"
