Hi Folks,  I know I should join EA (eBay Anonymous), but I bought a 15"driver that I need the T/S parameters for.  Its an Eminence, butnot from the Greek line (Alpha, Beta, etc).  The model number onthe magnet sticker is 55-785.  It seems to be tuned pretty low andhas high Qms (flops around a lot).  At one time I found a simpleweb page loaded with driver specs, but I can't for the life of mefind it.Thx, chris
