Hi Folks, I know I should join EA (eBay Anonymous), but I bought a 15"driver that I need the T/S parameters for. Its an Eminence, butnot from the Greek line (Alpha, Beta, etc). The model number onthe magnet sticker is 55-785. It seems to be tuned pretty low andhas high Qms (flops around a lot). At one time I found a simpleweb page loaded with driver specs, but I can't for the life of mefind it.Thx, chris
