Hi Folks, I know I should join EA (eBay Anonymous), but I bought a 15" driver that I need the T/S parameters for. Its an Eminence, but not from the Greek line (Alpha, Beta, etc). The model number on the magnet sticker is 55-785. It seems to be tuned pretty low and has high Qms (flops around a lot). At one time I found a simple web page loaded with driver specs, but I can't for the life of me find it. Thx, chris
