Subject: Compressed fiber carpet pad for cabinet damping?

I have a bunch of this wool-like 1/2" thick carpet pad that I got for use in a tapered quarter wave tube project and was wondering if it can adeqately be used to line the specified interior sufaces of my Theater 4's? It is pretty dense stuff- not fluffy like insulation that I've heard is OK to use. Can anybody help me out here? What is best to use? Thanks!Garland
