Subject: Wayne, creating large corner horn for non-corner use... Posted by Adam on Sun, 16 Dec 2001 21:34:05 GMT View Forum Message <> Reply to Message

Hey, I was wondering what your thoughts are on building a 7 pi corner horn, and rather then placing it in the corner of a room, use plywood to build a giant horn mouth like the corner of a room so it can be used in places other then in a corner. It would prolly be pretty big, with the horn edge shooting out like 4' with a giant mouth, very difficult to move, very heavy... Do you think it would be worth it? Would it have the same effect as a standard corner placement???ThanksAdam
