Hi Wayne Thanks for this great forum and your speakers look great!! I am a little new to the do it yourself speaker school but that Tent Sale is just to good to pass up. Mike B. sent me here looking for info on the 2226. The perfect place! I have been looking at your crossover document, great document!!!, and will be using 2416-H's as my compression drivers. Wanted to do a 3 way with 2035's 2122's and 2416's. I have the 2373 horns and I believe them to be very similar to the 2370 with a higher crossover point. Also have some 2344 or 2342. I have been looking for a crossover values document for the various Pi desiqns using the 2426 but can't find it?? I would like to try your compensation circuit. Could you help me out?Regards Rob
