Here... An Alpha 10" coupled with a supertweeter. Both Eminence equipment, no piezos. Cross the two over at 4 or 5 kHz, second order on the tweeter, first on the woofer, or even no crossover on the woofer (I'm not really into that though, since I don't know the exact FR of the woofer). Also have to attenuate the tweet by 8-10 db. With the sale, the combined price should be around 130 dollars plus some shipping. It should leave you *just* enough to build the crossovers and enclosures without going much over 200.http://www.partsexpress.com/pe/showdetl.cfm?&DID=7&Product_ID=7637&CATID=49http://www.partsexpress.com/pe/showdetl.cfm?&DID=7&Product_ID=7579&CATID=49Adam
