I have a couple of old 12 inch Pyle MH1229 speakers lying around. The specs are:voice coil= 1.5
insensitivity= 97 dBfs= 59 HzVas= 3.2 cu ftQts= .55power= 95 wattsfrequency responce= 65-6.5
kHzAre these speakers worth using in a full range system with a compression horn and
crossover? And what type of enclosure would work best?Thanks in advance.Dave
