Here's my situation. I'm a software engineer between payinggigs, so I've got some time but no money. I'd like to picka Pi Speaker project and start working on the cabinet - andget the components later. Going over the archives I have comeup with 2 component options.1) Eminence Delta 15, Eminence PSD2002 or2) JBL 2226, Eminence PSD2002The 2226 is an option assuming I can get a used one at a goodprice. I'll decide between bass reflex and folded horn later,but the smaller Professional 4 is more practical in my house.Some other background.My current amps are an HHScott 299B (rated 22wpc) and anentry level Teac AG-380 receiver. I plan to build a scratchpush-pull EL34 tube amp to mate with the Pi speaker later.I listen to all kinds of music. My wife is a church organistand I collect pipe organ CDs and LPs.What do you think.What price range can I find a used JBL 2226?How does the sound quality of the JBL 2226 and Delta 15 compare?Should I consider other PI speaker?Thanks. Wayne and this forum are a great inspiration.
