Hello CraigI want to use the drivers for a 3 way system. I have a pair of 2122 midrange drivers I just got from the Tent Sale. So it will be the 2035's crossed over about 250Hz-390Hz passive L/R 12DB slopes to the 2122's to the 2416's at 1.1K-1.3K. I also have some 2342 baby cheeks for the 2416's. Think I am just going to try to steal a JBL crossover design because I am worried about getting the high frequency compensation right on the Baby Cheeks. I figure I can always change out the woofers if I don't like them but I think once I get the 2122,2416 and baby cheek horns humming I should have a very nice sounding combination to work with. But we will see how this all will go. Its real easy to say what your gonna do but doing ain't easy at all!! At least I have plenty of time as I am happy for the most part with what I am using now. But how can you pass up those drivers! Its fun to play with this stuff anyway.
