Hi there,I have not started to build 2Pi yet, because i am hesitating tostart may be with a dessign offering more bass.I can't find any comments/recommendation of Beta-15 speaker in 4Pi.Is there some reason I ignore ? After last change of Eminence parameters, it seems that Beta-15is quiet good replacement for oldest Aplha-15: require the similar boxdimensions and offer the similar bass response (Beta-15 in 7cu ft has -3dB at 44Hz, Alpha-15 -oldestt- had -3dB at 42Hz in 8 cu ft).This is nearest than new Alpha-15 which require 11.5 cu ft.Is there some sonic penalty for Beta-15 ?Thanks in advance,O'Tor.
