Interesting that parts are different in the 3677S than they are in the 3677. Its 2373 horn is very similar to the Peavey CH-3. The woofer sounds like a substitute woofer that can be used in cabinets tuned for 22xx drivers like the 2205, 2225 and 2226. All in all, for a hundred bucks, it still sounds like a real good deal.
