Hi Wayne,Thanks for your response. I would also like to ask you if the midrange quality of Alpha-based one and two Pi is the same. I.e. the only change for the passing from one Pi to two Pi is the benefit of deeper bass ?I am asking this because in the hifi-line, there is often some midrange degradation for the largest cones, especially when they are used with no low-pass crossover (often a huge peaks andirregularities in the 3-5kHz region, and often not shown on thedriver SPL plot but still audible). TIA,O'Tor
