cheers gang, i sold my 7 pi's because they projected into the room like a pair of refrigerator's. my 4 pi's fit well but i want the soundstage a rear mounted driver provides. how close to the corner can i keep the speakers? if i want them tight can i use a smaller driver? is there a formula for corner horn loading? TILL E. and i must be the dumbest guy's on this forum. hey, i appreciate the help, if ever any of you freaks are in toronto, steaks and vino (and good tunes) are on me.cheersgeorge
