Subject: Use compression tweeters Posted by Wayne Parham on Wed, 16 Jan 2002 03:17:09 GMT View Forum Message <> Reply to Message

Piezo's aren't bad for some things but I think you're outrunning them with the rest of your gear. Try some compression drivers instead. You might want to hornload your mids too, or use more of them. With that many drivers, it might be best to make line arrays for the 12" drivers and tweeters and hang them at each side of the stage.
