I've done a simple experiment on EAC's varying copy speed. It's set to tell EAC I want 1x copies but it must know better than me what's right. Here are the results ...I have a few of my dad's old CD-R's that are 8x. EAC copies onto those at 7.9! On a CD-RW I'm using, the max write speed is 12x. It's copying those files at 10x . Last one. On a black Memorex CD-R with a potential of 48x, it copies, again, at 7.9. I guess it DOES know better than me. Anyway, the copies sound just fine. jim...
