Subject: piezo buzzing when amp clips. Posted by Andy G on Thu, 24 Jan 2002 00:27:53 GMT View Forum Message <> Reply to Message

The piezo is protected? by (from the piezo) an 18ohm in series, then 22ohms parallel then 2μ F in series. This should give some cut below 3500. When the amp clips, the piezo really buzzes, is there any way I can stop this happening??
