Subject: xover plan for 4648a-8, jbl 2345 with jbl 2426 Posted by tdc on Sun, 03 Feb 2002 00:13:17 GMT View Forum Message <> Reply to Message

The previous responses indicated that a pxb11 1k6 with the 10 mfd. cap removed does the bass end. The compensation network consists, I quess, of two resistors of some value in series on the pos side with a cap of some value between them bridging to the neg line???. If I on the right track could someone advise me and tell me what value to use for the resistors and cap. Thanks tdc
