Subject: Are Graphic Equalisers the best for getting extra bass

To get more deep bass, or thumping bass a Graphic Equaliser helps re-produce more bass. Cos a bass bin linked with a high/mid section and two power amps ain't gonna produce any more bass than what is recorded. But when the recording is fairly weak, I boost eq bands or tone controls on the mixers, which leads to distortion at high volume levels. Is there any other device which can boost the bass without loads of distortion?
