\$295 with shipping, mills and all. PE had everything in stock, so now I'm waiting with the enclosures 90% done, and no H-290/PSD2002's/xover parts on hand. I went with all Dayton caps vs. Solen, only saved \$20 or so there, but I've used the dayton's before and like them. Xovers will be piece built, when you do the LF and HF that way, there are a few more \$ saved, and the LF coil is 14 ga. air core, HF is 18 ga. No zobel considered at present, the 2035's have a very flat z, jbl claimed maybe still resistive at 1 kHz...Le is only 0.25 mH. Sam
