were crafted of cabinet birch and edge glued polar in the workshop at Boot Hill Audio Design, a small "off shore" concern located in a far west province of the Republic de Tejas. They are an interpetation of Wayne's 4 Pi Pro(E) design that implements the jbl 2035, although the enclosures are "drop in" perfect for the 2226's he uses. Final listening/tweaking is almost complete, results will be posted here soon. Sam
