---

thanks again for your help colin. here's my question. looking at the eminence published charts the kappa15lf has a big dip between 30-50hz. the kappa 18's response is smoother with a gradual rise from 30-20hz. also the useable response is 25-500hz for the kappa 18 versus 35-3khz for the kappa 15lf. i'm green at this but to me it looks as if the kappa 18 is the better choice. if i'm missing something help me out please. i'm planning on placing the jbl 4655's on top of the subwoofers and they will be in corners. on top of all this i just received a sample eminence driver(oem) available at a surplus price. take a look at the spec's and see if this is workable as a sub.18"

subwoofer  
accordian cloth surround  
3" kapton voice coil  
4 layer  
95oz ceramic magnet  
Re(ohms) 7.84  
Fs(hz) 22.74  
Le (mh) 1.88  
Mms(g) 145.3  
Qm 10.30  
Cms(mm/N) .337  
2Qe .310  
Rms(Ns/m) 2.015  
6QT .300  
Vas (L) 615.56  
Xmax(mm) 4.80  
Sd (cm^2) 1140.09  
BL (Tm) 22.92  
EBP 73.40  
EFF(%) 2.25  
SPL (db) 95.50  
let me guess, these 18" drivers need a huge enclosure?  
thanks for all your help. cheers, george
